ABOUT US

La Peseta is a DeFi (decentralized finance) project created on the Binance Smart Chain network. Its main objective is to be used as a daily payment method. This is made possible by its speed, low network cost, and the fact that it does not need to be mined to verify transactions, making it sustainable and environmentally friendly. We are also integrating more long-term goals, such as NFT games and integration of the currency into payment platforms, etc. We will update the goals and progress on the roadmap.

The traditional Peseta was the currency of the Spanish state before the introduction of the Euro. Nowadays, it still remains in the minds of many Spaniards, and we remember it with great nostalgia. The idea of being able to use La Peseta as a digital asset is something that excites us and fills us with enthusiasm. Many expressions, as well as mathematical calculations, are still being made in Pesetas instead of Euros. The Reales also coexisted with Pesetas for years, as the fraction of 1 Peseta. Older people remember and talk about those moments with great nostalgia.

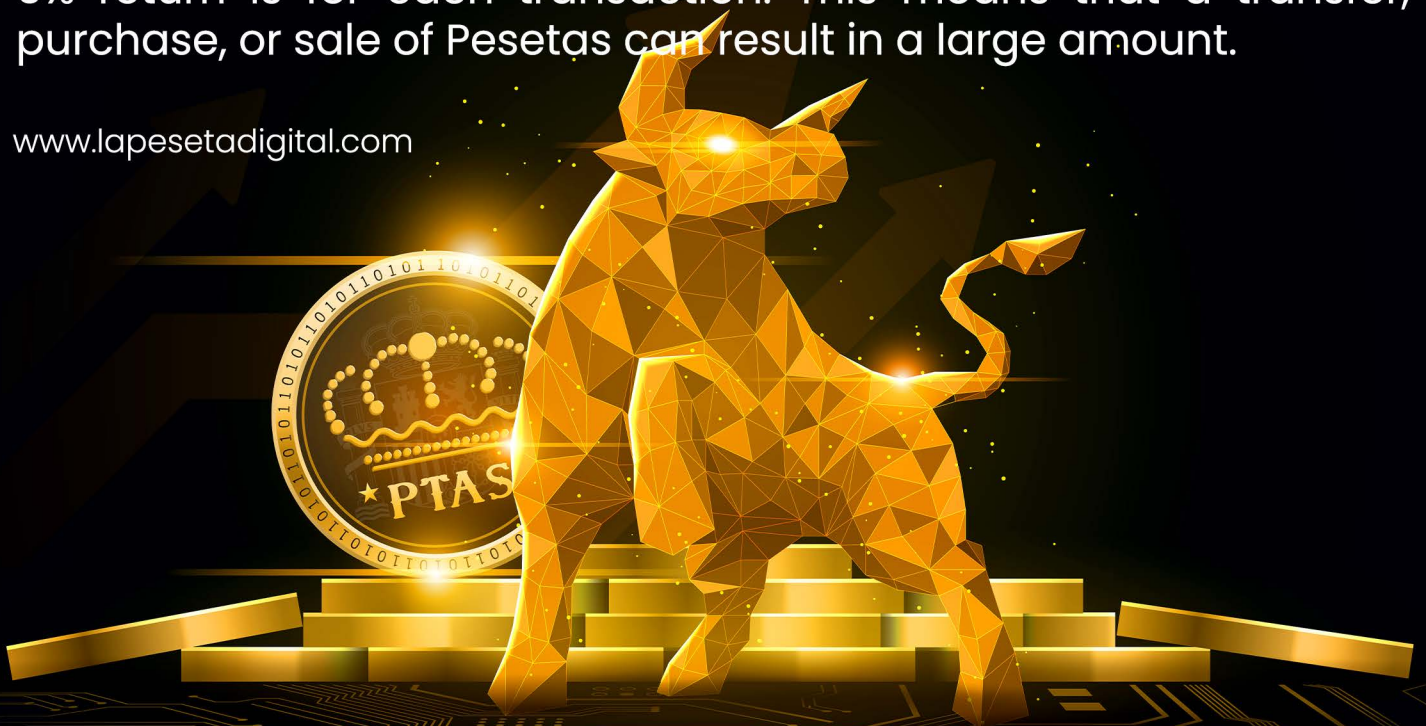

OVERVIEW

Before creating the project, we studied the market, the potential of the project, and all the possibilities we have to continue advancing with new objectives. From listings on exchanges, integration of the currency into payment platforms, integration into NFT games, or using the Iota protocol (Internet of all things), etc. Our greatest desire is to improve Peseta by Peseta and take advantage of the potential that new technologies have to build a fairer, more transparent, and environmentally sustainable world. We believe that the project is much more than a simple payment method, which is why we are working hard to comply with future regulations not only in our country (Spain) but also internationally. We think that registering with Aseblac (the body responsible for regulating and advising on money laundering and terrorism) from the beginning of the project will help us avoid many problems in the future or problems that cannot be solved because they were not addressed before.

For any investor after studying the market, we believe that La Peseta has incredible exponential growth potential due to its low supply and continuous burning for each transaction.

Firstly, once you make your first purchase, you will see that your initial amount increases thanks to continuous transactions. The more you hold, the greater the reward. It should be noted that the 5% return is for each transaction. This means that a transfer, purchase, or sale of Pesetas can result in a large amount.

WHAT IS THE LA PESETA (PTAS) TOKEN ?

1.1 It is a DeFi (Decentralized Finance) project created on the Binance Smart Chain network. Its main purpose is to be used as a daily payment alternative to the EURO and the DOLLAR. This is possible due to its speed and it doesn't need to be mined to verify transactions, which makes it sustainable and environmentally clean.

1.2 The idea is to use (PTAS) for any payment of small and large amounts between individuals, businesses, or companies.

1.3 The traditional Peseta was the official currency of the Spanish government before the EURO. Nowadays, it is still in the minds of many people in Spain and around the world. So, thinking of being able to use La Peseta (PTAS) as a digital asset is something that can revolutionize the Spanish financial market.

INVESTMENT STRATEGIES AND OBJECTIVES

3.1 Before creating the project, we were studying the market, the potential they have as a project, and all the possibilities we have when it comes to continuing to advance with new objectives. From listings on exchanges, integration of the currency into payment platforms, integration into NFT games, or using the Iota protocol (Internet of All Things), etc.

3.2 We believe that the project is much more than a means of payment. so we are working hard to comply with future

3.3 For any investor after a market research, we believe it has incredible exponential growth potential due to its low supply.

With the new contract, liquidity in the pool has become a very important objective, in order to guarantee its long-term use.

Another medium-term goal is to expand liquidity in other pairs and build bridges to other networks.

This project is not created to be speculated, since its true value is to be used as a means of payment PTAS & PTAS without being exchanged.
